Create A Data Pipeline based on Messaging Using PySpark and Airflow

Topic Name : BIG DATA

Sub-topic Name : BIG DATA PROJECTS

Course link : <https://ineuron.ai/course/Create-A-Data-Pipeline-based-on-Messaging-Using-PySpark-and-Airflow>

Course Description :-

In this Project, we will learn how to Build a Big Data pipeline on AWS at scale. You will be using the Covid-19 dataset. This will be streamed in real time from an external API using NiFi. The complex JSON data will be parsed into CSV format using NiFi and the result will be stored in HDFS. Then this data will be sent to Kafka for data processing using PySpark. The processed data will then be consumed from Spark and stored in HDFS. Then a Hive external table is created on top of HDFS. Finally the cleaned, transformed data is stored in the data lake and deployed. Visualization is then done using Tableau and AWS QuickSight.
